UNITED NATIONS
GENERAL ASSEMBLY
SPECIAL SESSION (UNGASS) COUNTRY PROGRESS REPORT

NIGERIA

REPORTING PERIOD: JANUARY 2008–DECEMBER 2009

MARCH 2010
UNGASS COUNTRY PROGRESS REPORT

NIGERIA

NATIONAL AGENCY FOR THE CONTROL OF AIDS

REPORTING PERIOD: JANUARY 2008–DECEMBER 2009

MARCH 2010
FOREWORD

Nigeria is pleased to submit her fourth country progress report on the UNGASS Declaration of Commitment on HIV/AIDS to the Secretary General of the United Nations.

Nigeria’s HIV response approach is built on partnership, capacity strengthening and knowledge generation and transfer, to effectively support policy and program development to best address HIV/AIDS and related issues. Partnership and collaboration with government at all levels, non-governmental organizations, people living with and at-risk of HIV and AIDS, public health and medical practitioners, researchers and scientists remain the bedrock of Nigeria’s response. Governments at all levels remain committed to a comprehensive and vibrant response to HIV and AIDS to ensure that the Millennium Development Goal of halting and reversing the spread of HIV is achieved.

Since the 2007 report, Nigeria has taken steps towards strengthening the HIV national response. The country’s HIV/AIDS policy (2003) was reviewed and a new national policy (2010) was developed. The National Strategic Framework 2005-2009 was reviewed and a new one that incorporates universal access targets was put in place for the period 2010-2015. The overarching goal of the new National Strategic Framework is to promote behavior change towards a reduction in new HIV infections. Also, in a bid to strengthen the national M&E system and make it fully functional and more effective in tracking progress of the national response, NACA led stakeholders to conduct a comprehensive assessment of the national M&E system. The results of the assessment are being used to strengthen M&E infrastructure and capacity at all levels.

This document benefited largely from the contributions of all stakeholders in Nigeria, including bilateral agencies, international non–government organizations and civil society. Their contributions are hereby acknowledged and appreciated.

It is hoped that this document will be used to guide the development of strategies and plans by all stakeholders in the country. NACA will continue to provide leadership
and collaborate with key partners such as USAID, DFID, UNAIDS, WHO, the World Bank, the Global Fund to Fight AIDS, TB and Malaria, CSOs and other stakeholders in the HIV response.

Professor John Idoko,
Director General,
National Agency for the Control of AIDS (NACA),
Nigeria.
ACKNOWLEDGEMENT

I wish to thank the Director-General of the National Agency for the Control of AIDS (NACA), Professor John Idoko who provided the moral, technical and financial support towards the development of this report.

On behalf of NACA, I would like to acknowledge the valuable support provided by the following persons and institutions: UNAIDS, FMOH/NASCP, FMOE, other Line Ministries, SACAs, NEPWHAN, CISHAN and Development Partners (Bilateral and Multilateral), Dr. Job Sagbohan (UNAIDS), Dr Adeniyi Ogundiran (WHO), Dr. Aderemi Azeez (FMoH-NASCP), Dr Issa Kawu (FMoH-NASCP), Mrs. Mercy Morka (FMoH-NASCP), Mrs. Omosebi (NTBLCP), Dr. Olufemi Abayomi (NBTS) and Dr. Segun Adedeji (NASA).

Special thanks go to Mr. Francis Agbo and Engr. Taophiq Alabi of NACA for their technical support. I also wish to appreciate the National M&E Technical Working Group and the implementing partners for their contributions in form of observations and inputs from inception to validation of the final draft.

Finally, I wish to appreciate the UNGASS team of consultants, Dr Adedayo Adeyemi (the lead National Consultant), Dr Abieyuwa Ogbe and Mrs. Lucy Okosun for their perseverance, hard work and dedication towards the completion of this report.

Dr Michael Kayode Ogungbemi,
Director, Strategic Knowledge Management Department,
National Agency for the Control of AIDS.
National Steering Committee

1. Prof. John Idoko – NACA, Nigeria
2. Dr. Warren Naamara – UNAIDS Nigeria
3. Dr Aderemi Azeez – FMOH, Nigeria
4. Dr Mukhtar Muhammad – CDC Abuja Nigeria
5. Dr Chiho Suzuki – FHI Abuja Nigeria
6. Mr. Femi Akinmade – NACA, Nigeria
7. Mrs. Ibironke Adeoye – NACA, Nigeria
8. Mr. Akin Akinrogunde – NACA, Nigeria
9. Mr. Frank Oronsaye – ICAP Abuja Nigeria
10. Mrs. Fati Murtala-Ibrahim – IHVN Abuja Nigeria
11. Mrs. Juliet Adeola – APIN Abuja Nigeria
12. Dr. Samson Adebayo – Society for Family Health
UNGASS Core Team

1. Dr Michael Kayode Ogungbemi – NACA, Nigeria
2. Dr. Job Sagbohan – UNAIDS Nigeria
3. Dr. Adedayo Adeyemi – Lead Consultant
4. Mr. Francis Agbo – NACA, Nigeria
5. Dr. Abieyuwa Ogbe – Data Manager
6. Mrs. Lucy Okosun – Data Manager
7. Engr. Taophiq Alabi – NACA, Nigeria

EXECUTIVE SUMMARY

HIV/AIDS is a global crisis with Nigeria ranked second in the number of people living with HIV/AIDS after South Africa. Nigeria is therefore committed to monitoring progress in reducing the spread of HIV in line with the United Nations’ Declaration of Commitment.

Specific responses established at the national, state and local government levels have been well coordinated and sustained towards achieving the targets set out in the 2001 Declaration of Commitment on HIV/AIDS in the areas of universal access to comprehensive prevention, treatment, care and support programs.

National responses have been scaled-up significantly to all parts of Nigeria in terms of prevention, treatment, care and support programs. Also, institutional and technical capacity building, surveys and surveillances among pregnant women; most at risk population and general population have been strengthened and sustained for effective monitoring and coordination of the response. Furthermore, the Nigerian success model is built on accountability, strong monitoring and evaluation system, evidence-based and culturally appropriate programming strategies, policy implementation and analysis, and program linkages.

Equally important, the country is committed to achieving the Millennium Development Goal of combating HIV/AIDS, malaria and other diseases through multisectoral collaborations for HIV/AIDS response to prevent new infections and mitigate its impact.

The country has the opportunity of utilizing the stakeholder-driven and vibrant multisectoral national HIV response model. This model has led to strengthened and increased support for stakeholders (civil society, private sector, women, youth & religious leaders); strengthened national monitoring & evaluation systems; creation of key strategic documents and guidelines for program management and key priority setting for HIV prevention, treatment and care. However, there is a need to strengthen research, monitoring and evaluation, and increase data use to improve programming, policy and resource mobilization. Political commitment especially at state and local
government levels need to be strengthened; operations research should equally be an integral part of program implementation, and increase funding in all thematic areas especially prevention of mother to child transmission of HIV.

Likewise, the leadership and coordination from National Agency for the Control of AIDS (NACA) have led to significant progress in the areas of prevention, treatment, care, and support, and human rights with the implementation of national strategies to promote gender equality and women empowerment. However, there is urgent need to strengthen the responses at the state and local government levels for a wide coverage and sustained response.
1. Introduction

The United Nations General Assembly Special Session (UNGASS) 2010 report provides an opportunity to appraise progress in reducing the spread of HIV and its impact in Nigeria. A Declaration of Commitment (DoC) on HIV/AIDS at the twenty-sixth special session of the General Assembly was adopted by 189 member states including Nigeria in June 2001 as a formidable response to HIV/AIDS.\(^1\) This was a crucial international agreement needed to motivate a coordinated and sustained response in the fight against HIV drawing from previous experiences and lessons. Additionally, Heads of State and representatives of Governments came up with a Political Declaration on HIV/AIDS in June 2006 towards a comprehensive review of the progress achieved in realizing the targets set out in the 2001 Declaration of Commitment on HIV/AIDS.\(^2\) The Political Declaration addresses political will, strong leadership, commitment and country-driven actions towards achieving the goal of universal access to comprehensive prevention, treatment, care and support programs.

HIV/AIDS is a global crisis, a challenge to human life and dignity with ability to erode social and economic development. It has great influence on stability, life expectancy and economic development. It is a major public health problem with Sub-Saharan Africa severely affected by the epidemic.\(^3\) HIV has the potential of hindering the realization of the Millennium Development Goals and its spread promotes poverty, and has unleashed immense suffering on different countries and communities worldwide.\(^4\)

Therefore, collective and coordinated global actions are needed to combat all aspects of the disease with an aim of preventing millions of needless deaths. This exceptional and comprehensive global response includes leadership, prevention, treatment, care

---

and support, and human right with implementation of national strategies promoting
gender equality and the empowerment of women.

Member states have an obligation to regularly report the progress made in the fight
against HIV/AIDS to the General Assembly. The DoC includes progress on
preventing new infections, prevention of mother to child transmission, provision of
treatment, search for vaccine and cure, as well as care for the infected and affected
people. This declaration is an important mandate to improve response and remind
member states that there is hope in the fight against HIV with sufficient will,
resources, commitment and support. Subsequently, the Joint United Nations Program
on AIDS (UNAIDS) is charged with the responsibility of collecting and processing
the report for the General Assembly. UNAIDS therefore developed core indicators for
monitoring the Declaration of Commitment on HIV/AIDS in 2002. Member states
were saddled with the responsibility of submitting progress report every two years to
UNAIDS. This is needed to create a global alliance towards awareness, engagement
and mobilization for mitigating the spread and impact of HIV/AIDS.

Besides, Nigeria is committed to achieving the Millennium Development Goal of
combating HIV/AIDS, malaria and other diseases through multisectoral
collaborations for AIDS response at local, state and national levels to prevent new
infections, scale-up access to treatment and care, and mitigate the impact of
HIV/AIDS. The successes recorded in reducing new infections and expansion of
treatment have been made possible as a result of collaboration involving various
Ministries, governmental agencies/parastatals, non-governmental organizations,
people living with HIV/AIDS and development partners.

Likewise, the National Agency for the Control of AIDS (NACA) has provided
effective leadership, coordination, sustained commitment and conducive environment
for stakeholder-driven broad multisectoral partnership along with the development of
National HIV/AIDS Plan and strategies. NACA has been involved in strengthening
health systems, policy and administrative measures to prevent HIV with emphasis on
human rights, reducing vulnerability, and stigma and discrimination against the
devastating effects of HIV. Furthermore, the Nigerian success model is built on
accountability, decentralization, strong monitoring and evaluation system, evidence-
based and culturally appropriate programming strategies, policy implementation and analysis, strengthened capacity, program linkages and sound HIV surveillance system.

In December 2005, Nigeria hosted the International Conference on HIV/AIDS and Sexually Transmitted Infections in Africa (ICASA). This was an opportunity for African countries to learn from evidence-based practices, share knowledge, strengthen existing collaboration and form new partnership in the fight against HIV. In November 2007, Nigeria hosted the forth forum of the African AIDS Vaccine Program (AAVP) to share information and knowledge in the areas of research and development of HIV vaccines, best practices and challenges, and to strengthen African involvement in HIV vaccine research. Moreover, Nigeria conducted an Integrated Biological and Behavioral Surveillance Survey (IBBSS) in 2007, a population-based survey among most at risk groups including female sex workers, men that have sex with men, injecting drug users, transport workers and uniformed service personnel. The IBBSS and other previous surveys were efforts that Nigerian government has made to provide reliable estimates of overall HIV prevalence, overview and characterization of the sexual risk behaviors among the general population and most at risk populations. Also, there was a data triangulation exercise in 2009 which focused on sexual transmission of HIV and its prevention efforts. It made use of available multiple data sources in the country towards providing evidence capable of informing new programs, policy and research. Nigeria equally engaged in the modes of transmission (MOT) study in 2009 to evaluate the populations most likely to contribute to transmission of HIV or new infections in line with UNAIDS recommendation for initiating second generation HIV surveillance systems. MOT results provide evidence in priority setting for resource allocation towards national prevention interventions, and strengthen policy, research and programmatic recommendations towards national prevention and strategic framework.

National Agency for the Control of AIDS and Health Systems 20/20 Project conducted a sustainability analysis of HIV/AIDS response in Nigeria in 2008. Strategic information such as data on demographics, epidemiology, funding levels, service delivery and human resources collected at state and national levels were fed into an HIV program Microsoft Excel model to estimate the recurrent costs and non-pecuniary resources required to sustain and scale up HIV/AIDS services. This was important for cost effective response to HIV program and to identify expected resource gaps in both financing and human resources. Also, this HIV/AIDS Program Sustainability Analysis Tool (HAPSAT) was needed for evidence-based, results-oriented decision-making that is critical to sustaining and scaling up our HIV/AIDS response.9

Equally important, Nigeria through NACA showed commitment to resource allocation and mobilization by carrying out a National AIDS Spending Assessment (NASA) in 2009. This was needed to strengthen national assessments of AIDS-related spending in order to support the coordination and harmonization of HIV/AIDS resources. Likewise, this assessment was a model to track the allocation of HIV/AIDS funds and to facilitate actions which strengthen capacities to effectively track expenditures on HIV/AIDS towards decision making.

All these efforts were to further operationalize the Declaration of Commitment on HIV/AIDS through meaningful leadership and evidence to sustain gains in HIV prevention and achieve future successes in limiting the spread of HIV.

The production of the Nigeria 2010 UNGASS report has been facilitated by NACA in partnership with UNAIDS; National Monitoring and Evaluation Technical Working Group (M&E NTWG) provided an oversight for the process while a broad based consultation with national stakeholders was carried out for validation. The report highlights the achievement of UNGASS goals, national commitments and

---

9 HIV/AIDS Program Sustainability Analysis Tool (HAPSAT): SUSTAINABILITY ANALYSIS OF HIV/AIDS SERVICES IN NIGERIA 2009
accountability with time-specific targets using the core indicators for the monitoring the Declaration of Commitment.

Finally, this report acknowledges that national efforts have resulted in important progress in the areas of leadership, funding, expanding access to HIV prevention, treatment, care and support, and in reducing the prevalence of HIV.
2. Country Profile

FIGURE 1. Map of Nigeria

Nigeria is located on the West Coast of Africa with a land mass of 923,768 square kilometers between 4°16’ and 13°53’ north of equator, and between 2°40’ and 14°41’ east of Greenwich. It is bordered by Niger Republic (north), Chad (north-east), Cameroon (east), Benin Republic (west) and Atlantic Ocean (south). Nigeria is the most populous country in Africa with a population of 140million in 2006. In addition, Population Reference Bureau estimated the Nigerian population to be 152.6 million in mid-2009 making Nigeria the eighth most populous country in the world.10

*Population Reference Bureau 2009 Data Fact Sheet

**Human Development Report 2009

There are over 250 ethnic and linguistic groups in Nigeria. However, there are three major languages namely: Yoruba, Hausa and Igbo with English being the official language. Nigeria is a democratic Federal Republic country comprising thirty-six states and one Federal Capital Territory with capital city in Abuja. Nigeria has three tiers of government: national, state and local government. The country is made up of 774 local government areas and the states are grouped into six geopolitical zones – North West, North East, North Central, South West, South East and South-South according to geographical proximity and ethnic homogeneity. Nigeria is endowed with human resources, and natural resources such as crude oil and gas, bitumen and agricultural products such as palm oil, rubber and cocoa. Nigeria is a secular state with Christianity and Islam as the two main religions. Political commitments,

economic growth, religion and culture have played various roles and impacts in HIV epidemic.
3. Status At A Glance

3.1. Inclusiveness of the Stakeholders in the Report Writing Process

The process of developing UNGASS 2010 report started in October 2009 with consultations involving NACA, UNAIDS, Line Ministries and Civil Society groups. The process was stakeholder driven, and offered the opportunity to sustain mechanisms for monitoring and evaluating progress made in national HIV/AIDS response. The development also involved formation of UNGASS Technical Working Group that met several times to review the collected indicators. The first meeting of the UNGASS Technical Working Group highlighted main responsibilities of the members of the group and also discussed the objectives of the reporting. The process of the development involved collection of service/program data from different units of Federal Ministry of Health such as National HIV/AIDS and Sexually Transmitted infection Control Program (NASCP) and Blood Bank, and Federal Ministry of Education.

Various published reports such as ANC 2008, NARHS 2007, IBBSS 2007 and NDHS 2008 were reviewed. In addition, secondary data analysis was done with ANC 2008, NARHS 2007 and IBBSS 2007 survey data to obtain survey related indicators and disaggregation. Literature review was done to strengthen the quality of the report with published articles. Spectrum model was run to generate some needed data.

Indicator values obtained for UNGASS 2010 were compared with the indicator values for UNGASS 2007 to appreciate trend and magnitude, and to assess gaps in HIV/AIDS national response.

Similarly, 18 National Composite Policy Index (NCPI) questionnaires were administered to organizations/institutions (nine government institutions and nine non-government institutions involving non-governmental organizations, UN organizations, bilateral agencies and civil society groups). The questionnaires were administered to the HIV/AIDS focal persons in these agencies and organizations.
In addition, the UNGASS consultants were responsible for the administration, collection and collation of the National Composite Policy Index (NCPI) questionnaires part A to government institutions:

I. Strategic plan
II. Political support
III. Prevention
IV. Treatment, care and support
V. Monitoring and evaluation

The consultants were also responsible for the administration, collection and collation of the National Composite Policy Index (NCPI) questionnaires part B to non-government institutions.

I. Human rights
II. Civil society involvement
III. Prevention
IV. Treatment, care and support

Before the main validation meeting, implementing partners had the opportunity of examining health sector related indicators in a meeting held in Kaduna Nigeria on March 11, 2010.

Validation meeting was held on the 24th March 2010 involving all stakeholders and UNGASS Sub-committee meeting involving a smaller number of stakeholders was held on the 26th March 2010 to finalize the UNGASS 2010 indicator verification and report.

Hence, the process of development of UNGASS 2010 involved consultations of all stakeholders at the planning, data collection, data collation, data analysis, report drafting and final submission of the report. The final draft report contained inputs, feedbacks and comments from various stakeholders.
3.2. Status of the Epidemic

Nigeria HIV prevalence is estimated at 3.6% (NARHS 2007) which is a population-based survey. Antenatal sentinel survey has been used to monitor the trend of the epidemic over time. In 2008, the prevalence among the pregnant women was 4.6% which could be considered a progress from 5.8% in 2001. Despite that, more interventions are needed to limit the spread of HIV in Nigeria. Current estimates by the Federal Ministry of Health (FMOH) indicate that 2.98 million people are living with HIV/AIDS in Nigeria in 2009 with a total AIDS death of 192,000. One of the most remarkable social and economic impacts of HIV/AIDS is the ever increasing number of AIDS orphans which was estimated at 2.12 million in 2008 and 2.175 million in 2009. Despite national prevalence of 4.6%, there are several variations by state and local government area. At the zonal level, prevalence is lowest in the South West (2.0%) and highest in the South-South (7.0%). Age group specific prevalence is highest in the age group 25-29 years (5.6%) and lowest in the 40-44 years age group (2.9%) from the 2008 ANC survey.

3.3. **Policy and Programmatic Response**

The government of Nigeria has shown great commitment to the fight against the HIV/AIDS scourge. It is in pursuit of this purpose that the government through the HIV/AIDS governing body, NACA has formulated policies that affect every area of the nation’s multisectoral response to HIV/AIDS. The revised HIV/AIDS policy is as a result of broad consultations with the relevant stakeholders in the response. These include civil society organizations, PLWHA, line ministries and parastatals, development partners, donor agencies, faith-based organizations and community based organizations.

The HIV/AIDS policy serves as a statement of Nigeria’s determination to reverse the tide of the epidemic and mitigate its impact on millions of lives of Nigerians. Furthermore, it serves as a catalyst to speed up and generate a more coordinated and effective response to the epidemic.

The first policy statement was developed in 1997 by the Federal Ministry of Health. This was at the advent of the epidemic. This policy statement was later revised in 2003 by the National Agency for the Control of AIDS in collaboration with other stakeholders with the sole aim of mitigating the impact of the HIV/AIDS. The policy focused on five thematic areas:

- Prevention of HIV/AIDS
- Law and ethics
- Care and support
- Communication
- Program management and support (National policy on HIV/AIDS 2003)

The 2003 policy statement has been a useful tool and a guide for HIV/AIDS programs and activities till date; it recorded a lot of achievements. Nevertheless, in a bid to strengthen the national response and to incorporate emerging issues, a 2009 revised
policy has been developed. Some of the issues that the revised policy hopes to critically address are the following:

- The rising HIV prevalence among women
- The expansion in number of orphans and vulnerable children
- The stigmatization of people living with HIV/AIDS and violation of their rights as well as their roles and responsibilities.
- The differences in communication messages on abstinence, condom use etc in secondary schools and higher institutions of learning.
- The issues associated with increased access to treatment and care.\textsuperscript{14}

These issues have been incorporated into the new revised policy. The aim of the national policy is to provide a framework for advancing the multisectoral response to HIV/AIDS in Nigeria. The main target of the policy document is to have ‘halted, by 2015 and to begin to reverse the spread of the HIV/AIDS virus among Nigerians’.\textsuperscript{15}

The National Strategic Framework (NSF) was developed from this policy statement. The NSF has been in operation since 2005 till the end of 2009 as a skeletal structure on which HIV plans and activities are hinged on.\textsuperscript{16} The 2005 – 2009 NSF has been reviewed and a new NSF II 2010 – 2015 is in place.

The thematic areas in the revised policy are as follows:

- Prevention of new infections and behavior change
- Treatment of HIV/AIDS and related health problems
- Care and support for people living with and affected by AIDS
- Institutional architecture and resourcing
- Advocacy, legal issues and human rights
- Monitoring and evaluation

### 3.8 Comments for the Indicators:

1) **Indicator 1**: Domestic and international AIDS spending by categories and financing sources. This was obtained from the National AIDS Spending Assessment. Using an exchange rate of US$1=115 Nigerian Naira, US$394,963,881.00 is equivalent to Nigerian N45,420,846,315.

2) **Indicator 4**: There has been significant improvement in treatment coverage in Nigeria. UNGASS 2007: 16.7% (n=238, 659) and UNGASS 2010: 34.2% (n=302,973) with a p-value of <0.0001. However, Nigeria needs to work harder to reduce the 65.8% treatment gap (those needing ART – those on treatment).
3) **Indicators 8, 9, 14, 18, 19, 20, 21 and 23** were obtained from IBBSS 2007. The risk groups covered by this survey include female sex workers (brothel based and non-brothel based); MSM, Armed forces, Transport workers, IDU and police. The survey was conducted in 6 states namely Kano, Lagos, Edo, Anambra, Cross River and FCT. However, for MSM and IDU, it was conducted only in 3 states namely Lagos, Kano and Cross River. IBBSS is preferred because it is the most reliable population based estimates among the most at risk populations in Nigeria.

4) **Indicator 9:** Percentage of most-at-risk populations reached with HIV prevention programs.

The numerator was obtained by combining these 2 questions in the IBBSS database
1. Do you know where you can go if you wish to receive an HIV test?
2. In the last twelve months, have you been given condoms (e.g. through an outreach service, drop-in centre or sexual health clinic)?

UNGASS 2007 used only question1 from the database but UNGASS 2009 combined these 2 questions in the database to obtain the numerator. Despite using the same survey, UNGASS 2009 figure is different from UNGASS 2007.

Among the IDU, a third question was included based on UNGASS indicator guideline. Question: 3. In the last twelve months, have you been given sterile needles and syringes (e.g. by an outreach worker, a peer educator or from a needle exchange program)?

5) **Indicator 16:** NDHS figure: men 14.7%; women 1.4%; and both men and women (4.98%). NARHS figure of 11.4% was preferred over NDHS to allow for comparison with the previous UNGASS.

6) **Indicator 24:** Cohort analysis for survival after 12 months in Nigeria is 68.3%. The coverage, impact and quality of ART service delivery are important towards optimal survival of patients and Nigeria will benefit more from evidence-based HIV treatment approaches towards sustaining survival.
7) **Indicator 25:** Percentage of HIV infected infants born to HIV-infected mothers is 29.1% from Spectrum. Data collected from FMOH had 13.1% of infants born to HIV mothers infected. Nigeria needs to strive towards improving the impact of PMTCT service. Operations research in the area of PMTCT is needed to improve the quality of services, and scale-up of coverage so that more HIV positive mothers could benefit from.
4. Overview of the HIV epidemic

4.1. Generalised Epidemic

Nigeria has the second highest number of people living with HIV in the world after South Africa. UNAIDS estimated 33.4 million people living with HIV in 2008 in the world. Nigeria, with about 2.98 million people living with HIV, makes about 9% of the global HIV burden. However, there is gender inequality in the distribution with males accounting for 1.23 million and female accounting for 1.72 million in the HIV estimates and projections for 2008. Women are more affected in the defining feature of the epidemic with policy implications for prevention of mother to child transmissions. Hence, addressing gender inequality is crucial in the control of the epidemic. Nigeria recorded the first case of acquired immunodeficiency syndrome (AIDS) in 1986. Heterosexual sex remains the primary mode of transmission for HIV and accounts for 80-95% of HIV infections in Nigeria. Tracking the course of HIV epidemic in Nigeria requires good reporting and surveillance systems. Thus, Nigeria through the Federal Ministry of Health instituted regular surveillance system using clinic-based and population-based surveys to monitor the epidemic. This is needed to obtain reliable information about HIV prevalence and behaviors associated with HIV transmission or acquisition. These surveys have shown the dynamic nature of HIV epidemic in relation to temporal changes, geographic distribution, magnitude, and modes of transmission. Furthermore, this surveillance system provides opportunities to monitor trend in prevalence, create awareness about early response, inform priority setting for new interventions and measure the effectiveness of public health interventions in the control of the epidemic.

17 UNAIDS 2009 AIDS epidemic update: Global summary of the AIDS epidemic
20 Shisana O, Davids A. Correcting gender inequalities is central to controlling HIV/AIDS. Bull World Health Organ 2004; 82: 812
The Federal Ministry of Health and National Population Commission with support from NACA and other relevant stakeholders conducts four main surveys namely:

- National HIV/AIDS and Reproductive Health Survey Plus (NARHS Plus) – This is a population based survey that estimates HIV prevalence and obtains information on the associated factors. In addition, it provides information on the sexual and reproductive health status in the country. It is usually conducted every two years.

- HIV/STI Integrated Biological and Behavioral Surveillance Survey (IBBSS) – This survey is targeted at the most at risk populations whose behaviors or occupations often place them at higher risk of contracting sexually transmitted infections including HIV. It estimates HIV prevalence among the most at risk populations and provides information on drivers of the epidemic among these groups. It is usually conducted every two years.

- Antenatal Care survey – This is a clinic based sentinel survey to estimate HIV prevalence among pregnant women attending antenatal clinic. It is conducted every two to three years.

- Nigeria Demographic and Health Survey (NDHS) – It is a nationally representative survey. Prior to 2008 survey, the last one was in 2003. It is conducted by National Population Commission with international support.

HIV epidemic rose from 1.8% in 1991 and peaked at 5.8% in 2001. It is currently at 4.6% in 2008 antenatal survey. Figure 1 below shows a rapid rise in HIV prevalence in the sentinel surveys carried out from 1991 to 2001 (1.8% in 1991 to 4.5% in 1996 and then to 5.8% in 2001). Subsequently, the trend reversed and took a downward turn from 5.8% in 2001 to 5% in 2003 and then to 4.4% in 2005.26,27

Although a slight increase was observed in HIV prevalence from 4.4% in 2005 to 4.6% in 2008.\textsuperscript{28,29} However, in each of the sentinel surveys there were significant variations in the different states of the federation.

In addition, the National HIV prevalence was 3.6% from the National HIV/AIDS and Reproductive Health Survey (NARHS) 2007.\textsuperscript{30} NARHS has the advantage of being a population based survey. NARHS 2007 report shows 78.6% of males and 78.5% of females accepted to be tested among the survey participants. Likewise, among the male participants, HIV testing coverage was higher in the rural areas (81%) than the urban areas (75%). While among the female participants, HIV testing coverage in the rural areas was 79% compared to the urban areas (78%). Similarly, North East zone had the highest testing coverage (85%) and age group 15-24years (80%). At the same time,

time, the report shows that more females (4.0%) were infected than males (3.2%). Prevalence was slightly higher in urban areas (3.8%) compared to rural areas (3.5%). North Central Nigeria has the highest prevalence of 5.7% with South East having the least 2.6%. Youths (ages 15 – 24 years) had a prevalence of 2.4% which was about 67% of the national HIV prevalence of 3.6% in the survey which buttresses the fact that youths are important risk group in HIV epidemic.31

The NARHS report further shows that HIV prevalence in the general population was higher among those with tertiary education (4.0%) compared to those without education (2.7%). HIV prevalence among those who had sex in the last 12 months: male (3.9%) and female (4.4%). In addition, among males that ever had sex HIV prevalence was 3.8% unlike in males that never had sex 1.7%, while in female that ever had sex was 4.7% and those that never had sex 1.7%. Males that exchanged sex for gifts had prevalence of 5% and those that did not had HIV prevalence of 3.9%. Females that exchanged sex for gifts had prevalence of 5.2% and those that did not had HIV prevalence of 3.9%. Females with two or more non-marital sexual partners had prevalence of 14.5% unlike males with two or more non-marital sexual partners with prevalence of 1.5%.

In the most recent 2008 sentinel survey, national HIV prevalence for women attending ANC was 4.6%. Nigeria has a generalized epidemic with a prevalence above 1% as defined by UNAIDS/WHO Working Group in 2000. This sentinel survey was carried out in the 36 states of Nigeria and the Federal Capital Territory (FCT). The results of the survey indicate that Ekiti state in the South West zone of Nigeria had the lowest prevalence of 1.0%, while Benue state in North Central zone had the highest prevalence of 10.6%. Additionally, Bwari local government area in the Federal capital territory had the highest site prevalence of 22%.34

The ANC survey report shows women with primary, secondary and tertiary education had HIV prevalence of 5.1%, 5.8% and 4% respectively. Single women had higher HIV prevalence than married women (5.9% versus 4.7%). HIV prevalence was 5.4% in North Central zone with rural prevalence of 4.7% and urban prevalence of 6.2%. North East had prevalence of 4% with rural prevalence 3.1% and urban prevalence 4%. North West had prevalence of 2.4% with rural prevalence 2% and urban prevalence 2.6%. South East had prevalence of 3.7% with rural prevalence 3.4% and urban prevalence 5.4%. South West had prevalence of 2.0% with rural prevalence...
1.7% and urban prevalence 2%. South-South had prevalence of 7% with rural prevalence 4% and urban prevalence 7.1%.

Furthermore, five states namely; Plateau, Gombe, Zamfara, Bauchi and Ekiti showed a consistently decreasing HIV prevalence from 2001 to 2008 in antenatal sentinel survey.

**FIGURE 4.** Geographic Distribution of HIV Prevalence by States: Federal Ministry of Health ANC 2008 Report

In figure 5, there was a noticeably declining trend among women aged 15-24 years from 2001-2008.

The graph below (figure 6) shows zonal trend in ANC surveys from 2003 to 2008 to appreciate the magnitude and trend of the epidemic in Nigeria.

Source: ANC Sentinel Surveys, FMOH
Similarly, urban and rural trends in HIV epidemic are shown below:

4.2. Prevalence among Different Age Groups

The ANC survey report shows that age group 25 – 29 years had the highest HIV prevalence with age group 40- 44 years having the lowest prevalence.
With the current HIV prevalence of 4.6%, it was estimated that the number of people living with HIV at the end of 2010 will be 3.11 million using Estimation and Projection Package (EPP) and Spectrum models. The number of new infections will be 339,016 (males 150,351 and females 186,665); total number that will require antiretroviral therapy will be 910,850 (adults 807,166 and children 103,684). Estimated annual AIDS deaths in 2010 will be 181,774 (males 81,728 and females 100,046). Furthermore, the number of children orphaned by HIV will be about 2.2 million and the number of HIV positive pregnant women will be 243,730.

However, National response targets from the Nigerian National Response Information Management System Operation Plan 2007 – 2010 are reduction of HIV prevalence by 25%; prevention of 55% of new HIV infections and treatment of 550,000 HIV positive people by 2010. Hence, Nigeria is committed to intensifying programs aimed at increasing HIV prevention and treatment efforts.
4.3. Mode of HIV Transmission in Nigeria

Nigeria undertook modes of transmission (MOT) modeling in 2009. The UNAIDS Modes of Transmission model was undertaken by the National Country Team, with support from UNAIDS and the World Bank, and was built on the World Bank epidemiology and response synthesis project in Nigeria. The model estimates the distribution of new infections and identifies populations at highest risk for HIV infection.

Moreover, the modes of transmission model has the potential of contributing to the understanding new infections, drivers of the epidemic and ongoing efforts in HIV prevention response in Nigeria among general populations and various target groups. MOT can assist in priority setting for resource allocation towards national prevention interventions, and strengthening policy, programmatic and research recommendations towards national prevention goals and strategic framework.

The model shows that high-risk groups will significantly contribute to new HIV infections. These high risk groups are about 1% of the general population, and are men that have sex with men, female sex workers and injecting drug users. They will contribute almost 23% of new infections. Also, the high risk groups and their partners will contribute 40% of new infections. However, people practicing low-risk sex in the general population will contribute 42% of the infections due to low condom use and high sexual networking.\(^{32}\)

4.4. HIV Prevalence among Most at Risk Population (MARP)

HIV/AIDS Integrated Biological and Behavioral Surveillance Survey (IBBSS) was conducted in 2007 among sub-populations whose behaviors or occupations expose them to higher risk of acquiring or contracting sexually transmitted infections (STI). These sub-groups include men who have sex with men (MSM), female sex workers (FSW), injecting drug users (IDU), transport workers (TW) and uniformed service personnel. They are often neglected in prevention programs. The survey was conducted in five states namely: Anambra, Cross River, Edo, Kano, Lagos and the Federal Capital Territory (FCT) with the objectives of obtaining baseline data on risk behavior; determining the prevalence of HIV infection and syphilis; and assessing their knowledge and beliefs about STI.

---

Despite decreases in HIV prevalence in Nigeria, new epidemic foci arose among sub-groups often neglected in HIV prevention and control programs. Individual-level risks for HIV acquisition and transmission within the sub-populations are critical in the diverse ongoing epidemics and are impacted by social, structural, and sub-population-level risks and protections.  

**FIGURE 12. States Covered in IBBSS 2007**

HIV prevalence was highest among female brothel-based sex workers (37.4%); followed by non-brothel-based sex workers (30.2%); MSM (13.5%); IDU (5.6%); transport workers (3.7%); police (3.5%) and armed forces (3.1%).

---

Female sex workers (FSW) Brothel based and non brothel based.

Female sex workers were the sub-group most affected by HIV/AIDS in Nigeria. The IBBSS 2007 shows different HIV prevalence among FSW in different states. Federal Capital Territory (FCT) and Kano recorded the highest prevalence. In FCT, HIV prevalence was 49.2% and Kano state was 49.1% among brothel-based FSW. Lagos had the lowest prevalence of 23.5% (brothel-based) and 12.9% (non-brothel based), this may be due to the high condom use (98.2% in brothel based and 98.6% among non brothel based). Alcohol abuse was common among FSW with a quarter or more consuming alcohol daily. However, the survey shows condom use was lower in sexual relationships with boyfriends (38.1% in brothel based and 46.1% in non-brothel based) and casual partners (83.2% in brothel based and 84.8% in non brothel based) as this is a potential bridge in the spread of HIV to the general population.
Men that have sex with men (MSM)

Men that have sex with men were surveyed in three states namely: Lagos, Kano and Cross River states. The overall prevalence among MSM was 13.5%. However, there was considerable variation in the three states with Lagos having a prevalence of 25.4%, Kano 11.7% and Cross Rivers 2.8%. The MSM were a younger group compared to other risk groups with about 75% less than 25 years. MSM had high knowledge of HIV prevention. None had syphilis. Consistent condom use was lower among MSM than FSW. Similarly, there was a low level of exposure to interventions among MSM with about one quarter receiving safe sex education from peer/outreach workers. Due to low consistent condom use in anal sex and high biological risk of HIV acquisition associated with unprotected anal sex, HIV prevalence may worsen among this group and may affect the general population since there is sexual networking with female partners.

*Source: IBBSS 2007, FMOH*
Injecting drug users (IDU)

The three states (Kano, Lagos and Cross River) surveyed in the IBBSS 2007 showed that injecting drug users had the third highest HIV prevalence after FSW and MSM. Kano had a prevalence of 10%, Lagos 3% and Cross River 3%. IDU are equally younger and about 60% were sexually active in Kano and Lagos. However, IDU based in Kano were of great concern as they injected drugs more than once a day and less than 40% of them consistently used sterilized injecting needles. About 20% of the IDU reported sex with FSW, with low condom use. There was a low prevalence of syphilis (1.2%); over five percent of IDU reported STI symptoms; and about 60% had received HIV education in the past 12 months of the survey.

FIGURE 15. HIV Prevalence by States among IDU and MSM

Armed forces/Police/Transport workers

The bio-behavioral survey done among uniformed service personnel and transport workers in certain states in the country showed that there were considerable variations in HIV prevalence.

The table below shows HIV prevalence among transport workers and uniformed service personnel for Anambra, Cross River, Edo, F.C.T, Kano and Lagos.

FIGURE 16. HIV Prevalence Among Transport Workers, Police And Armed Forces

Source: IBBSS 2007, FMOH
Transport workers, armed forces and police had the lowest prevalence of HIV ranging from 3.1 - 3.7% in the IBBSS 2007. These sub-populations engaged in multiple partnerships in the past 12 months of the survey with armed forces, police and transport workers having 37.3%, 29.4% and 37.9% respectively.

A sub-analysis by gender among the police force indicated a higher HIV prevalence among women especially in FCT. Consistent condom use among their male counterpart may be responsible for lower HIV prevalence.38

FIGURE 17. HIV Prevalence by Gender Among The Police

Source: IBBSS 2007, FMOH

**Syphilis prevalence**

The IBBSS survey indicated a very low level of Syphilis. No syphilis was detected among MSM. The syphilis level was one percent or less among police, non-brothel based FSW and the armed forces.
Generally, there is a need to target most at risk populations (MSM, FSW, Transport Workers and Uniformed Service Personnel) with more prevention interventions based on IBBSS and MOT analyses of their contributions to HIV prevalence and where new infections are likely to occur among them and partners/clients.36

**Policy Documents in Nigeria as at the end of 2009:**

- HIV/AIDS Emergency Action Plan (HEAP)
- National Strategic Framework (NSF).
- National HIV/AIDS Policy
- NNRIMS Operational Plan
- National Education sector Strategic Plan
- National Health Sector Strategic Plan for HIV/AIDS
- National Economic Empowerment and Development Strategy (NEEDS).
- National OVC Plan of Action
- NEEDS

---

Priorities for 2010-2011:

PRIORITY A: Prevention of New Infections

- To enable 9.4 million sexually active adults access HCT services in an equitable and sustainable way.
- To provide 3.2 million pregnant women with access to quality HIV testing and counselling.
- At least 60% of Nigerians have comprehensive knowledge of HIV/AIDS and 60% of sexually active males and females use condoms consistently and correctly with non-regular partners.
- At least 60% of PLHIV have access to positive health, dignity and preventive programs.

PRIORITY B- Treatment of HIV/AIDS and related conditions

- At least 60% of eligible adults and 60% of children are receiving ART based on national guidelines.
- To provide at least 60% of PLHIV with quality management of OIs (diagnosis, prophylaxis and treatment).
- To implement TB/HIV collaborative services in at least 50% of Nigerian States.

PRIORITY C- Care and Support of PLHIV, PABA and OVC

- To provide access to quality care and support services to PLHIV by at least 20% on baseline value.
- To reduce stigma and discrimination targeted at PLHIV and PABA at least 30% on baseline value.
- To build capacity of OVC households to mitigate the impact of HIV/AIDS by 10% above baseline value.
PRIORITY D- Monitoring and Evaluation

- To set up mechanisms to enhance the effectiveness of various levels of government for the delivery of one national M&E system
- To improve the coordination and cost effectiveness of data collection, analysis and use for program planning and decision making
- To develop HIV evaluation and information mechanisms to enhance national response
- Provide improved data quality and supportive supervision at all levels of government

PRIORITY E-Research

- To provide supportive environment to generate relevant HIV/AIDS knowledge
- To establish mechanisms for utilization of research products for policy and program in states within the country
5. National Response to the HIV/AIDS Epidemic

5.1. Background

Initially, there was national health sector response to limit the spread of HIV after the first case of AIDS was reported in Nigeria in 1986. However, the advent of democratic rule in 1999 led to the initiation of drastic measures to curb the already increasing spread of the epidemic and to move the response from a health centered response to a multi-sectoral response.

The adoption of a national multi-sectoral response led to the creation of the Presidential Council on AIDS (PCA) and the National Action Committee on AIDS (NACA) in 2001 to coordinate the activities at the federal level. At the state and local government levels, the coordination was done by the State Action Committee on AIDS (SACA) and by the Local Government Action Committee on AIDS (LACA) respectively.

NACA with the collaboration of the relevant stakeholders developed the HIV/AIDS Emergency Action Plan (HEAP) in 2001. This served as an interim action plan and it focused on three major areas: creation of an enabling environment through the removal of socio-cultural, informational and systematic barriers to community-based responses; prevention; care and support. Similarly, NACA developed National HIV/AIDS Policy to create the enabling policy environment to drive the response against HIV/AIDS and developed guidelines for ART, PMTCT and HCT. The demand for a more comprehensive response which included treatment led to the development of the National Strategic Framework (NSF) in 2005. The development of the NSF was done in collaboration with different stakeholders.

The goal of the National Strategic Framework (NSF) is to reduce HIV incidence and prevalence by at least 25%, and provide equitable prevention, care, treatment, and support while mitigating its impact among women, children and other vulnerable groups and the general population by 2009.
NSF Objectives and Strategies:

Objective 1: Increase uptake of HIV/AIDS program implementation rate by 50% from 2005 to 2009 through improved coordination mechanisms and effective mobilization and utilization of resources.

Objective 2: Ensure 95% of the general population makes the appropriate behavioral changes (safe sex and abstinence through social mobilization by 2009.

Objective 3: Increase access to comprehensive gender-sensitive prevention, care, treatment and support services for the general population, PLWA and orphans and vulnerable children by 50% in 2009, and mitigate HIV/AIDS impact on the health sector.

Objective 4: Increase gender-sensitive non-health sectoral responses for the mitigation of the impact of HIV/AIDS by 50%.

Objective 5: Ensure 95% of specific groups make the appropriate behavioral changes (safe sex and abstinence) through social mobilization by 2009.

Objective 6: Strengthen national capacity for monitoring and evaluation of the HIV/AIDS response such that the national monitoring and evaluation plan is 100% implemented by 2009.

Objective 7: Build national capacity for research, knowledge sharing, and the acquisition and utilization of new HIV/AIDS technologies.

Objective 8: Create an enabling social, legal and policy environment by a 50% increase in the number of reviewed and operational gender-sensitive and human rights-friendly policies, legislations and the enforcement of laws that protect the rights of the general population, particularly PLWA, by the year 2009.

---

The NSF objectives have served as a guide towards strategic plan and action till date. The NSF has been reviewed and a new six year National Strategic Framework for the period 2010-2015 has been developed to further strengthen the national response.

Multi-sectoral response involves civil society organizations, network of people living with AIDS (NEPWAN), faith based organizations, line ministries, non-governmental organizations, development partners and the private sector. There has been improved participation of the private sector, civil societies and international partners over the years in the national response.

This multi-sectoral response has led to better resource mobilization and coordination among stakeholders (public, private and the civil societies) in a “Three Ones Model” (one national structure, one strategic plan and one monitoring and evaluation framework).

5.2. Coordinating Structures

The national response is coordinated through a three-tier system of administration led by NACA, SACA and LACA. At the federal level the National Action Committee on AIDS (NACA) was legally transformed into National Agency for the Control of AIDS through an Act of Parliament in 2007 to give it more autonomy, improve efficiency and accountability. NACA is headed by a board and the responsibility of the board is to provide the following:

- Leadership and advocacy for the prevention and control of the HIV and AIDS scourge in the federation; and provide intergovernmental and multisectoral coordination;
- Facilitate the formation and development of national and international partnerships and collaboration for the purpose of enhancing Nigeria’s control initiatives on the HIV/AIDS pandemic;
- Facilitate funding for effective dissemination of information and counseling against HIV infections, and care and support for people living with HIV and AIDS throughout the federation;
• Review from time to time the extent of the implementation of the National Strategic Framework on the prevention and control of HIV/AIDS by the Agency (NACA Act 2007).

The chairman and the other members of the board are appointed by the President of the Federal Republic of Nigeria. The members include a representative of relevant ministries, non-governmental organizations and civil society organizations. The National Agency for the Control of AIDS is headed by Professor John Idoko.

5.3. The Public Sector Response

Nigeria HIV/AIDS response is multisectoral which involves participation of all sectors to limit the spread of HIV by bringing in their competencies and capacities in an effectively coordinated response model.

The Health sector response is led by the Federal Ministry of Health through a sub-body; National AIDS and STI control program (NASCP). The core components of its response are in the following;

- Prevention and health promotion
- Treatment and care
- Influencing positive changes in health systems and health standards
- Informed policy and strategic development
- Strengthened health information system

Prevention and health promotion involves supporting programs that serve to educate the general population and increase awareness about HIV/AIDS. It also promotes safer sex practices among youths, high risk groups and the entire population.

Treatment and care: Adequate system has been put in place to manage HIV/AIDS, opportunistic infections and sexually transmitted infections. This involves over 200,000 patients on antiretroviral therapy.
Health Sector Strategic Information

The Nigerian government has taken steps by initiating and strengthening the HIV seroprevalence sentinel survey and bio-behavioral surveys among the general population and most at risk populations. Additionally, monitoring systems have been put in place to monitor the use of financial and human resources. Policies have been made to reduce discrimination and stigmatization of people living with HIV/AIDS. Similarly, there is an adequate mobilization of non-governmental organizations, the business sector, the PLWHA and vulnerable groups.

Among the early achievements of the Federal Ministry of Health are the promotion of safer sex behavior, blood safety measures, management and treatment of STI, reduction of HIV transmission through piercing objects like injections and razor blades, establishment of HCT centers and even local production of condoms. Its priority intervention was in the following areas:

Preventive interventions for the general population and most at risk populations (MARPS)

These interventions include blood safety procedures, family life and sex education in schools and the training of peer educators, increased availability of condoms and increased services for STI treatment.

Treatment, care and support for people living with HIV/AIDS and people affected by HIV/AIDS.

This has been achieved largely through public sector hospitals and community networks. Public sector hospitals are mainly responsible for the provision of antiretroviral therapy as well as prevention of mother to child transmission (PMTCT) services through counseling and treatment, and the management of tuberculosis and other opportunistic infections.

Line Ministries Response:

There has been establishment of HIV/AIDS responses in all the Line Ministries towards a robust public sector response. This involves support to Line Ministries to design and implement long term sustainable programs in their respective sectors among their staff in a workplace HIV/AIDS programs and activities targeting their clientele based on the sector’s competences.
Critical Mass teams and Project Teams have been established in the Line Ministries and their parastatals. Line Ministries developed annual workplans in line with national priorities, they have been involved in capacity building, development of workplace policy, peer education by National Youth Service Corps, and development of sectoral strategic plans. Additionally, prisons conducted a situational analysis of HIV in Nigerian prisons in 2009. National Agency for the Control of AIDS (NACA) provides technical assistance for the design, planning, implementation and monitoring of their programs.

5.4. The Private Sector Response

Public-Private Partnership Forum was established to leverage the vast pools of private sector resources and competencies as a bridge towards sustainability for the national response. For example, through Nigeria Business Coalition Against HIV/AIDS (NIBUCCA), 39 multi-national companies, such as MTN, Coca-Cola, Julius Berger, Nigerian Breweries, Cadbury, Guinness, Chevron supported workplace programs including prevention, treatment. In addition, companies supported outreach programs to the public embedded in Corporate Social Responsibility portfolios either directly or through partnerships with local organizations.

Examples of achievements in this regard include,

- NACA partnered with ECOBANK to establish 7 youth friendly reproductive health centers in 7 universities namely, Universities of Abuja, Uyo, Jos, Nssuka, Port-Harcourt, Ile-Ife and Ogbomosho to provide AIDS information and counseling services, training of youths peer educators and HCT.

- MTN Foundation is an emerging creative model of comprehensive corporate contribution to HIV/AIDS prevention.
• Zain, a telecommunication service provider supports 20 toll free phone lines for HIV/AIDS information services provided by an NGO which has served over 100,000 callers.

• Partnership between NACA, LNG, SHELL and Exxon-Mobil provides comprehensive prevention, treatment, and care and support worth over N500million in communities in the Niger Delta through the IBANISE ART program.

• Technical assistance provided to 29 companies to develop workplace policies and HIV/AIDS interventions by AED/SMART WORK program.

• NIBUCCA provided technical assistance to trade/ workers unions to develop HIV/AIDS programs.

Challenges/Issues

• The scope and engagement of companies in the private sector response remains limited to multinationals. Small and Medium Enterprises remain unengaged in HIV/AIDS activities particularly in the states.

• Limited or insignificant private sector response in many states. Evidently, HIV/AID is not recognized as priority issue by companies.

• Workplace stigma and employment discrimination against PLWHA remains a major challenge in private sector settings

5.5. Civil Society Participation in the National HIV Response

Civil Society Organizations, Faith Based Organizations (FBOs) and community leaders have valuable roles in preventing new infections and mitigating the impact of HIV in Nigeria. Civil society encompasses such organizations as local and international nongovernmental organizations, community-based organizations, community development associations, Faith-Based Organizations, support groups for people living with HIV/AIDS (PLWHAs), professional associations, and trade unions.
Civil Society Organizations have taken center stage in the prevention and control of HIV/AIDS in Nigeria, and have made their marks during the last two decades. The unique strength of CSO is their ability to provide platform to challenge, evaluate and strengthen government policies so that the policies could be culturally appropriate to the people and communities. Their use of participatory approaches and integration with communities place them at a vantage point to be able to tackle the social and cultural determinants driving the epidemic. Hence, CSO have been involved in community engagement to limit the impact of HIV/AIDS. CSO are adept at uniting the underprivileged and marginalized people in the society, building their capacity and promoting their social inclusion. Nigeria has a flourishing CSO participation in HIV/AIDS prevention. They have served as a source of social capital and network across many Nigerian communities. The emergence of the Civil Society Consultative Group on HIV/AIDS in Nigeria (CISCGHAN) in 2002 provided the first opportunity for local CSOs to provide coherent input to Nigeria’s HIV/AIDS policy formulation and implementation. CISCGHAN coordinates, facilitates, advocates and ensures the needs and issues of CSOs working on HIV/AIDS are addressed. CISCGHAN also provides a coordinated input into the national response to HIV/AIDS epidemic.

Additionally, CISCGHAN is engaged in the consultation process of the World Bank Multi-Country AIDS program (MAP) to ensure that the program implementation manual for the World Bank HIV/AIDS Fund (HAF) reflected the needs of CSOs. Thus, CSOs are important players in HIV/AIDS program implementation in Nigeria. CSO are involved in various programs such as prevention, treatment, care and support, and institutional capacity building. Similarly, international NGOs working with and through local CSOs manage more than 70% of the program interventions in the country. CSOs have contributed immensely in the areas of research and surveillance among the general populations and most at risk populations such as National HIV/AIDS and Reproductive Health Survey and Integrated Biological and Behavioral Surveillance Survey.

Achievements of CSOs

CSOs have made some indelible marks in Nigeria’s HIV/AIDS prevention efforts such as:

1. **Enhanced Program Capacity**: The engagement of CSOs in HIV/AIDS interventions has resulted in an increase capacity for program implementation. The CSO capacity for influencing policy and networking has greatly increased.

2. **Involvement in Policy Development**: The civil society mapping by ActionAid in 2001 showed that most CSOs were seen only as program implementers. However, the emergence of CISCGHAN and the development of the HEAP strategy provided the basis for the formal involvement of CSOs in influencing policy in Nigeria.

3. **Collaboration and Networking**: The CSOs have been involved in collaborations in sourcing for funding and implementing programs. Information flow has improved, with the Nigeria e-forum, an internet based information sharing tool coordinated by Journalists against AIDS acting as a medium of information flow.

4. **Program Implementation and Research**: Most program interventions in Nigeria are being managed by international NGOs working with local counterparts. Such programs include the Nigeria AIDS Responsive Fund project funded by Canadian International Development Agency and implemented by Pathfinder International; UNICEF programs and POLICY project of the Futures Group.

5. **Partnership with Government Agencies and the Private Sector**: There has been increase in CSO partnership with government agencies and the private sector. The government and private sector have recognized the competence of
CSOs and value their contribution to the national response in overcoming HIV epidemic.

**CHALLENGES**

Despite the achievements of CSOs in Nigeria, there are a number of challenges militating against their successes. These challenges include:

1. **Limited Institutional Capacity**: Though the CSO capacity for implementing programs is generally good, most of those skills lie within the narrow confines of prevention efforts that focus on sensitization and information, education and communication.

2. **Poor Documentation**: The lack of documentation tends to be a weakness of CSOs in Nigeria. They need to improve in the area of documenting programming lessons, experiences and successes. Skills for documentation are weak with lack of an effective project monitoring system further, as there is limited framework to capture change.

3. **Donor Driven Agenda**: Funding for HIV/AIDS in Nigeria is mainly from international donors. CSOs have no choice but to conform to donor driven agendas which may not necessarily solve immediate community needs.

CSOs have played significant role in Nigeria’s national response to the HIV/AIDS epidemic since 2000, with better results and enhanced capacity. The multi-sectoral approach adopted by the Nigerian government in its HIV/AIDS program has provided conducive environment for CSOs intervention in the sector.

**Progress Report:**

Nigeria had gone through various stages over the years in the control of HIV epidemic. Stages include the period of denial of the existence of HIV, followed by accepting the existence of HIV infection and employing effective measures to reduce new infections in the country. This effort has over time recorded a progressive reduction in HIV prevalence. HIV prevalence was 1.8% in 1991, 3.8% in 1994, 4.5% in 1996, 5.4% in 1999 and 5.8% in 2001. Thereafter, a decline was noticed as the prevalence dropped through 5.0% in 2003 to 4.4% in 2005 and currently stabilized at 4.6%. The HIV epidemic in Nigeria is characterized by one of the most rapidly
increasing rates of new HIV/AIDS cases in West Africa.\textsuperscript{38} This infection rate, although lower than that of neighboring African countries, should be considered in the context of Nigeria’s relatively large population. It was estimated that 3.11 million Nigerian adults and children will be living with HIV/AIDS by the end of 2010 from the HIV estimates and projection model.\textsuperscript{39}

The restoration of democracy in 1999 brought the first signs of a strengthened national response to the rising HIV prevalence. After the 1999 seroprevalence survey, a Presidential Council on AIDS (PCA) was formed. PCA membership included ministers from all sectors, with the President serving as Chairperson. Similarly, in early 2000, the President formed the National Action Committee on AIDS (NACA), which emphasizes a multisectoral approach to AIDS. Membership includes representatives from Ministries, the private sector, nongovernmental organizations (NGOs) and networks of persons living with HIV/AIDS. State and Local Action Committees on AIDS (SACA and LACA) were also being formed to spearhead the state and local multisectoral responses to HIV/AIDS.

Educational attainment of young women in Nigeria has increased in all parts of the country since 1990, but levels and trends vary widely across regions; Use of modern contraceptives among sexually active female adolescents has increased in most parts of the country but remains extremely low. Nationally, the proportion of people aged 15–49 years using modern contraceptive methods increased from 4% in 1990 to 9% in 2009.\textsuperscript{9} However; it is far higher in the South-South and South West (26–39%) than in other regions. About 30% of sexually active women aged 15–24 years had an unmet need for modern contraceptives.\textsuperscript{40} Government policies and strategies promoting the sexual and reproductive health of young people in Nigeria have not been successfully carried out. Hence, international, national and local nongovernmental organizations are implementing programs to promote the reproductive health of Nigerian youth.

\textsuperscript{38} HIV/AIDS in Nigeria: A USAID Brief

\textsuperscript{40} Sedgh G et al. Meeting Young Women’s Reproductive and Sexual Health Needs in Nigeria. New York: Guttmacher Institute, 2009.
Improving the sexual and reproductive health of young people will require effective leadership, coordination of disparate efforts; consultations with stakeholders; financial commitment on the part of the federal and state governments; and consideration of the varying religious, socio-cultural, familial and educational circumstances of adolescents in Nigeria.

Similarly, NACA has made great progress in strategic areas over the years. These areas include the following:

- Securing an increased Nigerian ownership of the HIV program at all levels and sectors
- Raising awareness about HIV/AIDS and discouraging stigma and discrimination
- Developing a strong multisectoral response
- Engaging various stakeholders and development partners in meaningful partnership towards reduction of new infections and providing adequate support for treatment, care and support.
- Institutional strengthening at the national and state levels
- Strengthening collaborations across Nigeria among civil society organizations including women coalition, private sector, religious bodies and youths
- Developing agenda for prevention, treatment and care interventions
- Strengthening of the monitoring and evaluation systems using databases such as NNRIMS, LHPMIP and DHIS at national and state levels
- Intensify resource mobilization and judicious allocation of resources
- Improving analytic work ad evidence generation for policy and program decision making
6. **Best Practices**

The Nigerian leadership is sensitive to the HIV/AIDS epidemic. In this regard, the government has worked carefully to formulate policies; create enabling environment and proactive leadership to combating this epidemic while ensuring a healthier Nigeria. Although HIV/AIDS was first discovered in 1986, sentinel survey results showed that HIV prevalence increased from 1.8% to 5.8% in the period from 1991 to 2001, and till 2005 when the first downward was recorded at 4.4%.

The political environment in Nigeria has progressively been favorable towards the AIDS response. The emergence of democratic rule in 1999 brought increased political commitment at national, state and local government levels. There has also been significant increase in government budgeting and disbursements to AIDS expenditures at the national level and in line with this, the National Economic Council in March 2007 directed all states to ensure that a minimum of 1% of their annual budgetary provision is dedicated to HIV and AIDS programming in their respective Ministries.

Due to the religious and socio-cultural peculiarities of the drivers of HIV infection in the country, the strategy of advocacy has been utilized to increase the commitment of political and religious leaders towards strengthening the established State and Local Agencies for the Control of AIDS (SACA and LACA). This effort is being led by NACA, and has the sustainable structure to be relied upon at each state and local government of the federation.

Similarly, Nigeria has followed suit in the formation of the Global Coalition of Women and AIDS by establishing and inaugurating National Action for Women Coalition and AIDS (NAWOCA) with state chapters already inaugurated in some states of the federation. NAWOCA addresses the vulnerability of girls, women and children through increased access to information and education on prevention, treatment, care and support for HIV and reproductive health services.

Following the trend of event the National Economic Empowerment and Development Strategy (NEEDS) was established in 2003. One of the goals of NEEDS is to control
the spread of HIV/AIDS in Nigeria, provide equitable care and support for those infected with HIV/AIDS and mitigate its impact to the point – where it is no longer of public health, social, or economic concern. The policy aims to create an environment in which all Nigerians will be able to live socially and economically – productive lives free of the disease and its effects.41

The following are Government policies under the NEEDS program:

- Reduce the disease burden attributable to HIV/AIDS and other opportunistic infections.
- Ensure the mainstreaming of HIV/AIDS issues into every sector (HIV/AIDS is more of a development issue than a health issue).
- Improve physical and financial access to good quality HIV/AIDS treatment, care and related health services.
- Improve its stewardship over policy formulation on HIV/AIDS, related Legislations, regulations, resources, mobilization, coordination, monitoring and evaluation.
- Foster effective collaboration and partnership necessary for mitigating the impact of HIV/AIDS.42

NEEDS projected that HIV prevalence would drop annually by 0.2% in 2003/2005. But the sentinel surveys in 2003 and 2005 show a decline of prevalence by 0.3 per cent. HIV/AIDS epidemic require a developmental, holistic, coordinated and multisectoral approach of which NACA has provided this approach. The strong political commitment of Nigerian leadership to fight HIV/AIDS served as a powerful catalyst and motivator for establishing a supraministerial and multisectoral body, the National Agency for the Control of AIDS (NACA). A national policy on HIV/AIDS was launched in August 2002 to give policy direction and to make a policy statement on the transformation of NACA from a Committee to a full-fledged agency that is well positioned and poised to scale-up the fight against the epidemic. Hence, NACA

---

43 National Economic Empowerment and Development Strategy (NEEDS)

44 2006 HIV/AIDS in Nigeria National Planning Commission
is committed to the following:

- To limit the spread of HIV/AIDS through advocacy, information and education campaigns.
- To focus on the treatment and care for people living with HIV/AIDS, which is a top national priority.
- To break down barriers to HIV prevention and support community based responses.
- To promote the development of HIV/AIDS workplace policy in public and private sectors

PREVENTION

The National HIV/AIDS Prevention Plan (2007-2009) has been developed to ensure the scale-up of implementation of prevention activities at all levels in the country.

In order to reduce the spread of new infection especially among the youths in school, NACA in collaboration with FMOH facilitated the development and implementation of Family life HIV/AIDS education program in the country. Reports collected from schools in Nigeria in 2009 showed that 23% of all public secondary schools are teaching family life HIV/AIDS curriculum in Nigeria.

Most at risk population such as female sex workers and their clients, men that have sex with men, uniformed service personnel and transport workers such as long distance drivers have continued to receive increased attention from the national response in a bid to reduce the spread of HIV/AIDS among these sub-groups, and between the groups and the general population.

In 2007, 30% of these most at risk groups took HIV test and received their test result, which is higher than general population of about 10%. Also, 50% of these groups were provided with a minimum package of prevention program while 92% of sex workers reported using condom with their clients. Intensified behavior change activities, community mobilization and advocacy at all levels have continued to produce significant impact on the epidemic.
The model of public-private partnership is one of the best practices to show corporate contributions to the HIV/AIDS Response. For example, NACA-MTN FOUNDATION collaboration addresses:

- Economic Empowerment through skills acquisition & provision of telephones as micro enterprise credit to PLWHA in rural areas.
- Establishment of youth friendly centers in three Universities in collaboration with NGO, Hope Worldwide.
- Touch Screen Program—12 machines located at strategic locations providing HIV information services in three main language and Pidgin English.
- Peer Education training for over 3,000 youths and 60 teachers.

SCALE UP OF TREATMENT PROGRAMS

There is an ongoing scale up of ART, PMTCT and HCT services across public, private and faith-based institutions across the country. As at March 2009, there has been scale-up of ART, PMTCT and HCT to 393, 670 and 1050 sites respectively across the country, from an initial 20 sites in 2002.

FIGURE 19. Sites Distributed by Ownership

Source: FMOH 2009 (HIV/AIDS Division)
Free antiretroviral (ARV) provision policy in 2006 has led to increased access and uptake. Annual number of clients on ART has increased from 50,581 at inception of
ARV provision in Nigeria in 2005 to 302973 in 2009. The contributions of the PEPFAR program within the country and the Global Fund Round 5 support have also played a significant role in the scale up of ART services in Nigeria.

Moreover, increased uptake of ARV drug in Nigeria is prolonging and improving the quality of life of HIV/AIDS patients in the country. For instance, the survival data of 2009 shows that about 68.3% of adults and children that were on treatment are still alive and healthy after 12 months.

**STRATEGIC PLANNING AND POLICY FORMULATION**

Nigeria developed a National strategic framework, which was put in place as her first multi-sectoral strategic plan. Given the federal nature of Nigeria, the states have also developed states’ strategic plans, which derive from the principles of the National strategy. The different sectors including the Health, Education, Youth, and women affairs have also established strategic plans which are providing templates for implementing their various responses. The life span of the strategic framework is 5years and, at its midterm in 2007 it was reviewed. The outcome of the review has provided information for a two-year evidence-based National Priority Plan for implementation. Three outstanding features of note in the priority plan are the need to deepen interventions in the prevention arena, re-strategize behavior change communication (BCC) systems and provide greater care for orphans and vulnerable children.

Thus, NACA has evolved a national prevention plan and is currently reviewing the BCC strategy in order to address the unique features of the national epidemic. The OVC strategy and plans are also being strengthened. In addition to these policy initiatives and given the dynamics of the global response to HIV, the HIV Counseling and Testing, Prevention of Mother to Child Transmission and treatment guidelines have been reviewed. This has all been achieved through a deliberate inclusion and active participation of all stakeholder groups at national, state and local government levels.
7. Major Challenges Faced and Remedial Actions

Despite the fact that Nigeria has made good progress in the response to HIV/AIDS over the years, there still exist gaps that challenge national response. However, the country is determined to overcome the challenges. The country has risen to the HIV/AIDS challenge with a determination to overcome the fight.

It is important to note some of the achievements recorded by the country in the response to HIV/AIDS:

• Increased in awareness about HIV/AIDS in the general population and significant efforts in reducing stigma and discrimination. The legislation on anti-stigma and discrimination is at an advanced stage.
• Nigeria has established a vibrant multisectoral response to the epidemic.
• At the end of 2009, over 300,000 persons have received ARV treatment therapy in over 400 centers spread across the country.
• The increased availability of antiretroviral therapy through the Federal Government free ARV policy has led to better quality lives for people living with HIV/AIDS.
• NACA and SACA (in 21 other states) have become agencies and are strongly committed to mitigating the impacts of HIV at Federal and state levels.
• There is implementation of HIV/AIDS programs in 28 Federal Ministries Department and Agencies (MDAs).
• State responses have been established and it is functional in 36 states and FCT.
• Nigeria has established a vibrant multisectoral response to the epidemic.
• Involvement of major development partners and relevant stakeholders has expanded response and funding to all states.
• Aid is given to key institutions to strengthen and coordinate the response at Federal and state levels.
• Approval by the National Economic Council that all states establish an agency with appropriate budgetary allocation for HIV/AIDS.

45 NACA: Status of the HIV National Response in Nigeria
• Strengthening and increasing support for stakeholders (civil society, private sector, women, youth & religious leaders) in effectively implementing multisectorial national response
• Setting agenda in terms of key priorities (e.g. Prevention, Treatment, and OVC).
• Creating key strategic document and guidelines for program management (NSF, NNRIMS, Prevention strategy).
• Developing and strengthening national monitoring & evaluation systems (NNRIMS, LHPMIP & DHIS)
• Increased funding for HIV/AIDS programs at all levels and sectors
• Involvement of Civil Society Organization in the national response through increased support for CSO networks
• Scale-up of treatment, prevention, care and support programs with increasing number of ART, HCT and PMTCT sites
• Establishment of Women Coalition on HIV/AIDS (NAWOCA) at national and in all states of the federation.
• Drop in HIV prevalence among youths from 4.3% in 2005 to 4.2% in 2008.28
• NACA in collaboration with FMOE facilitated the development and implementation of Family life HIV/AIDS education in the country. Reports collected from schools in Nigeria in 2007 showed that 34% of all public secondary schools are teaching family life HIV/AIDS curriculum in Nigeria. This has served to increase awareness among school children and youths and subsequently contributed to halting the spread of new infection especially among the youths in school.
• Increased attention has been given to most at risk populations in Nigeria these include commercial sex workers and their clients, men having sex with men, uniformed men and migrant workers such as long distance drivers by the national response. This is to stem the influx of HIV/AIDS among these groups and from these groups to the general population.
• At the end of 2009, more than 63,457 orphans and vulnerable children received free external support in form of school fees and materials, health care and foods. These activities were implemented to reduce the impact of HIV/AIDS among children.
• Active involvement of CSOs in the national response through increased support for CiSHAN, NEPWHAN, NYNETHA and NFACA (National Faith-Based Advisory Council on AIDS).

Despite these achievements, the country needs to work hard to overcome the following challenges such as:

• Inadequate funding and coordination of HIV prevention, treatment, care and support which is not commensurate with the scale and complexity of HIV epidemic in Nigeria
• Over-dependence on donor support
• Weak political and financial commitment at state and LGA levels
• Lack of National HIV/AIDS Research Agenda and poor coordination of research efforts
• Coverage and quality of PMTCT in Nigeria is poor (UNGASS indicator 25: percentage of infants born to HIV-infected mothers who are infected in 2009 was 13.1%)
• Limited knowledge of the drivers of the epidemic
• Low risk perception among policymakers and general population
• Inadequate supportive legislation for national and state level HIV/AIDS response
• Institutionalization of AIDS Spending Assessment for data on evidence based funding, resources, needs, gaps and sustainability
• Inadequate implementation of National M&E system and limited data use
• Focus has been mainly on intervention monitoring rather than impact evaluation
• Inadequate human capacity to effectively implement national response
• Poverty and gender inequality have continued to drive the epidemic

Remedial Actions:
NACA is working actively on strengthening political commitment towards increasing financial resources to HIV/AIDS programs. More advocacies are needed at national and state levels to improve political commitments and financial resources for HIV/AIDS response. Secondly, NACA is working on making research a vital component in the national response. This is needed to implement impact evaluation,
assess program sustainability and improve surveillance systems for HIV and STI. There is a need to scale-up PMTCT services in terms of coverage and quality. There is a need to empower women and address gender inequalities towards mitigating the impact of HIV. Lastly, national data triangulation exercise is on the way to inform priority setting for new programs, policy and research. It will also provide opportunity to evaluate thematic areas of national HIV/AIDS responses in order to assess reach, coverage, impacts and gaps.
8. Support from the Country’s Development Partners

Nigeria has a host of development partners who have contributed significantly to the national multisectoral HIV/AIDS response. Development partners have funded programs or activities in the areas of institutional strengthening, capacity building, prevention, treatment, care and support. It has been estimated that the Nigerian government contributes about 5 percent to the funding of antiretroviral treatment program. However, the majority of the funding comes from development partners. The main donors are the US President's Emergency Plan for AIDS Relief (PEPFAR), the Global Fund to Fight AIDS, Tuberculosis and Malaria, and the World Bank. In 2002, the World Bank loaned US$90.3 million to Nigeria to support the five-year HIV/AIDS Program Development Project. In May 2007, World Bank further allocated US$50 million loan for the program.

Similarly, in 2008 PEPFAR provided approximately US$448 million to Nigeria for HIV/AIDS prevention, treatment, care and support. This was the third highest amount out of PEPFAR’s 15 focus countries. By the end of 2008, the Global Fund had disbursed US$95 million in funds to expand treatment, prevention, and prevention of mother-to-child transmission programs in Nigeria. Much of this funding was to provide financial resources for the expansion of antiretroviral treatment program. The Global Fund is an important partner toward mitigating the impact of HIV/AIDS among children and adults in Nigeria. United Nations International Children's Emergency Fund (UNICEF) has been proactively engaged in the provision of technical assistance to the Federal and State Governments in both the development and implementation of proposals such as that of the Global Fund. UNICEF participated with UNAIDS in developing an inter-agency strategy to address HIV and women and girls.\textsuperscript{44} Substantive guidance was also provided to support the Global Fund in the development of gender strategies. UNICEF, the World Health Organization (WHO), the United Nations Office on Drugs and Crime (UNODC) and UNAIDS are committed to partnering with national and international stakeholders, for technical support in accelerating the scale-up of programs and tracking progress in

\textsuperscript{44} UNAIDS Action Framework: Addressing Women, Girls, Gender Equality and HIV. August 2009
prevention of mother-to-child transmission (PMTCT) of HIV, including the provision of care and support to the most vulnerable populations, such as women, orphans, children and their families.

UNICEF and other international partners supported the development and pilot testing of an innovative packaging of PMTCT-related commodities to sustain and further increase progress in the area of PMTCT and pediatric care, support and treatment. Likewise, in the prevention efforts, UNICEF promoted HIV-prevention life skills education to girls 15-17 years.

The following institutions are known to have earmarked resources for HIV/AIDS activities in Nigeria from 2005 to 2009.

FEDERAL GOVERNMENT OF NIGERIA

STATE GOVERNMENT

WORLD BANK

UNAIDS

UNESCO

UNIFEM

UNICEF

UNFPA

UNDP

DFID

CIDA

JICA

USAID

USDOL

DFID/SNR

DFID/SIPAA

AAIN

APIN

VMOBILE
MTN
MTN FOUNDATION
ECOBANK
JULIUS BERGER
CHEVRON/ELF

Undoubtedly, all these national and international partners are committed to making resources available in the fight against HIV. Despite that the resources are still limited. It is believed that with more support, commitment, effective leadership, sound coordination and conducive environment in Nigeria, huge success will be recorded in the fight against HIV/AIDS.
9. Monitoring and Evaluation Environment

9.1. Overview

Monitoring and evaluation (M&E) is a very vital aspect of multisectoral response to HIV/AIDS in Nigeria. Monitoring of the HIV/AIDS epidemic was done initially using HIV sentinel surveys among pregnant women accessing antenatal services in hospitals and clinics in line with global health standards from the World Health Organization. However, monitoring and evaluation system in Nigeria has experienced progress at all levels.

In order to monitor and evaluate multisectoral response to HIV epidemic, the country launched Nigeria National Response Information Management System (NNRIMS) in 2004 to monitor and evaluate implemented interventions, and provide a robust, standardized and unified monitoring and evaluation framework.\(^\text{45}\) NNRIMS has the functions of tracking progress in the implementation of the national HIV/AIDS response and using feedback information to improve policies, programs and service delivery.

Nigeria operates on the principle of ‘three ones’ which is one HIV/AIDS governing body, one strategic framework and one monitoring and evaluation system. The National Agency for the Control of AIDS has a well coordinated and suitably staffed Strategic Knowledge Management Department which has monitoring and evaluation as one of its key functions. The Department is also supported by a functional national technical working group which ensures that the M&E plan is precisely adhered to.

The National Agency for the Control of AIDS in 2004 initiated the formation of National M & E Technical Working Group to backstop the gap in technical capacities in monitoring & evaluation in the areas of prevention, treatment, care & support, research & surveillance, and capacity building. An HIV/AIDS NNRIMS Operational plan (NOP) was developed in 2007 as a guide or algorithm to data collection, management, analysis and reporting, decision making and program planning and

implementation. The presence of NNRIMS Operational plan has also led to harmonization of M & E tools by all partners. The long term vision is not only to reduce the incidence of HIV to the barest minimum but also to create an environment in which all Nigerians will be able to live socially and economically – productive lives free of diseases and its effects.

9.2. Achievements

One of the key achievements of the National Agency for the Control of AIDS is the development of Nigerian National Response Information Management system (NNRIMS). NNRIMS tracks the national response through an activity report system, a generation of comprehensive data of essential output indicators from a list of service delivery points using standard and harmonized tools. It has served as a guide in the monitoring and evaluation of interventions.

Other achievements include:

- NNRIMS operational plan (NOP) 2007 – 2010 which was developed after wide consultation with different stakeholders, with representatives from civil society including people living with HIV/AIDS. The goal is to provide a simple and robust monitoring and evaluation system as a part of the multisectoral HIV/AIDS response in Nigeria. The plan was designed to last till 2010 after which it will be reviewed.

- Harmonization of indicators and data collection systems, and standardize data tools

- Equally important, all 36 states and the Federal Capital Territory have been trained in the use of NNRIMS, and this training has been stepped down at state level and service delivery points are using the harmonized M&E tools.

- NACA with the support of partners embarked on a wide scale capacity building of M & E officers at the national and state levels through training on various aspects of M & E particularly on the Nigerian National Response Information Management System (NNRIMS) which is the fulcrum of M & E
activities in Nigeria. Since 2007, over 846 state-level M & E officers and those from LGAs and NGOs/CBOs have been trained to increase their capacities towards efficient M & E system in country.

- Well defined organizational structure for M&E including HIV M&E unit, Zonal M&E focal persons and State M&E focal persons

- 28 Federal Ministries, Departments and Agencies (MDAs) implementing HIV/AIDS programs have also developed supporting M&E systems aligned to National M&E system.

- Major development partners and other relevant public/private sectors’ stakeholders are contributing in varying degrees to strengthening the National M&E system.

- Conduct of regular Data Quality Audit exercise led and coordinated by NACA with the involvement of relevant stakeholders.

- National M&E Capacity assessment: In 2009, NACA led other relevant stakeholders to conduct a detailed assessment of the status of the national HIV M&E system using the 12 components of a functional M&E system as a framework. A standard tool was administered at a multi-stakeholder assessment workshop with distinct groups of stakeholders representing different institutions and levels of the M & E system which included NACA, SACA, NASCP, SASCP, CISHAN, NEPWHAN and other umbrella organizations, other public sector ministries, health facilities, donors and implementing partners in attendance. Findings and recommendations will be used to strengthen the country’s HIV M&E system to track progress in the national response more effectively and efficiently.

In addition, 29 states in Nigeria have installed the DHIS Electronic database for program monitoring and evaluation. The LHPMIP database, which complements DHIS, has also been rolled out to about 200 service delivery points and 20 states.
9.3. Key Aspects Of The NNRIMS Operational Plan (NOP)

The NOP 2007-2010 clearly indicates the following:

- Data collection strategy which addresses routine monitoring of programs, research, behavioral surveys and HIV surveillance.
- Standard and harmonized set of indicators
- Guidelines for data collection to aid M&E officers in the different service delivery points.
- Strategy to determine data quality: accuracy, completeness, reliability and validity.
- Data analysis and subsequent dissemination strategy.

The NOP led to the development of harmonized and standardized data tools and collection systems. Data collected by NNRIMS are for global indicators as well as for local indicators that are collected by specific organizations according to their goals and objectives. NACA ensures the use of a standardized reporting tool for uniformity.

9.4. Data Flow

The national HIV/AIDS M&E system’s goal is to track the progress being made in the national response. There is also a programmatic level M&E system which collects data for the use of implementers of HIV/AIDS program and for feedback to the national M&E system.

Every month NACA receives monthly reports on ART, PMTCT, HCT and laboratory services from its development partners as well as quarterly program reports.

In addition, there are three levels of reporting, the lowest level of reporting is at the facility level or at the implementing level. Each organization has indicators that guide their program activities.

The indicators required at the national level are recorded and put together at the facility/service delivery point, and then sent to the Local Government Action
Committee on AIDS (LACA) representing the first level. The LACA then aggregate all the data from the different facilities and send to the State Agency for the Control of AIDS (SACA), which is the second level, while the third level of reporting is to the national level from the states. At each of these levels there are feedback mechanisms in place. The National Agency for the Control of AIDS is responsible for dissemination of information to national and international bodies. The ministry of health, defense, internal affairs and other relevant Ministries Department and Agencies (MDAs) also feed data on their HIV response activities to the national response.

9.5. **Coordination of M&E Activities**

The coordination of M&E activities at the National level is done by the National Agency for the Control of AIDS. M&E priorities are determined through an M&E system assessment, which is carried out biennially. The assessment is done simply by sending an M&E system assessment tool to different organizations.

National M&E meetings are held twice a year to bring together different stakeholders to brief them on the progress as well as the challenges being made in the national M&E plan. State Agency for the Control of AIDS also hold quarterly coordination meetings with all the implementing partners to harmonize and analyze the data collected and address arising challenges.

The M&E officers in NACA work with other M&E officers in other organizations towards broad involvement and sense of ownership.

9.6. **Training of M&E Officers**

In order to build the capacity of M&E officers, training workshops are conducted regularly with participants from federal and state parastatals, line ministries as well as civil society. Training is focused on the relevance of monitoring and evaluation, the importance of timely and complete reporting of data and the need for consistency.
9.7. Research activities

At the national level, M&E research activities have been carried out in form of sentinel surveillance surveys. Examples include the 2008 Sentinel Seroprevalence Survey (ANC), the 2007 Integrated Behavioral and Biological Sentinel Survey (IBBSS) and the National AIDS and Reproductive Health Survey NARHS. They were coordinated by the Federal Ministry of Health with support from the National Agency for the Control of AIDS. All these surveys have measured successfully impact, output and outcome indicators as indicated in the National M&E plan. Other surveys conducted are the MARC survey by the Society for Family Health on high risk populations.

9.8. Evaluation

NACA has carried out evaluation activities to date among which are; Joint Review of MAP 1, Joint Mid-term review of NSF, Public Sector Impact Assessment, HAF CSO Assessment, National HIV/AIDS Policy review, National Strategic Framework review, and Socio Economic Impact study of HIV/AIDS. Also NACA has facilitated and supported the conduct of evaluations commissioned by some key partners, and these include OVC Situational Assessment and a National Survey on HIV/AIDS and School Health.

9.9. Analytic Work

NACA in the last two years has commissioned a number of analytic work on the epidemic and response to provide tools and evidence for policy and program decision making. These analytic works include:

2. Modes of Transmission Analysis.
3. HIV Program Sustainability Analysis.
5. HIV/AIDS Service Provision Assessment.
6. Data Triangulation.
9.10. Publications of M&E Reports

The National Agency for the Control of AIDS publishes several M&E reports through the M&E unit as required annually. Additionally, quarterly reports are available that focus on ART, PMTCT and HCT services. Other reports produced include the World Bank project monitoring reports, HAF monitoring reports and the UNGASS country report. These and others are made available on the NACA website once published.

9.11. Challenges

Despite the achievements and giant strides attained, there are still challenges. The major challenges encountered are as follows:

Structure

- The need for a new M&E plan that clearly indicates the responsibilities and roles of the Federal Ministry of Health, Federal Line Ministries and NGOs.
- Lack of strong M&E leadership in federal line ministries and NGOs
- The need for new allocation of duties within the M&E unit in NACA in order to address the key components
- The need for the development of M&E plan under the national strategic framework for states to give a sense of direction in their M&E activities.
- Additionally at the state level there is the challenge of insufficient funding for activities as well as inadequate M&E personnel.
- The need to improve the level of research in the evaluation systems. Researches should not be limited to surveys only but other methodologies capable of effectively evaluating prevention, treatment, care and support programs.
- There is a need to harmonize multiple data systems for prompt decision making

Human Capacity

- Capacity building programs are needed at all levels since this is vital to the overall productivity of M&E staff
Multisectoral M&E plan

- The need to link state and sector M&E plan to the national plan in all the key aspects e.g. data flow and reporting channel
- Lack of costed work plan to ensure effective resource allocation.

HIV Program Monitoring

- Presently, home based care activities are not being tracked and this is mainly due to the absence of data collection tools and lack of indicator definition
- Under reporting: This is mainly observed in submission of incomplete forms.
- Late reporting: Forms are submitted later than the stipulated dates and this hinders update of the database.
- Transfer of trained M&E officers from the facility/service delivery points.
- Poor filing and record keeping in some facilities.

9.12. Remedial Actions:

NACA is committed to investing in building capacity of personnel from different stakeholder groups as well as strengthening the research efforts in the evaluation systems by constituting a research team who work in partnership with different stakeholders especially Nigerian AIDS Research Network. Equally important, there is the revision of NNRIMS framework to align with issues articulated in new NSF. This will provide the opportunity to address the weakness, costing for operational plan and basis for resource mobilization towards efficient and effective monitoring and evaluation system. The country is committed to harmonize multiple data systems, facilitate timely collection of data from the field with analysis to enhance good feedback system.
10. Conclusion

The report shows the progress in the national response to the HIV epidemic in Nigeria. It was developed in collaboration with different stakeholders such as civil society groups and line ministries. Nigeria as a nation has shown great commitment to achieving the goals and targets that were made in the Declaration of commitment. This has been reflected in the giant strides that have been made in the following key areas:

- Increased HIV awareness among the general population and most at risk populations.
- Increased coverage in Prevention of mother to child transmission services.
- Seventeen states action committees out of the 36 states have been transformed to agencies leading to increased ownership and participation.
- Provision of more centers for counseling and testing
- Increased access to antiretroviral drugs
- Gender mainstreaming into the HIV national response.
- Development of policy documents such as the National Strategic Framework and Plan for 2010-2015.
- Scale up of ongoing national programs.

Despite all these achievements, there are still challenges that are being tackled, and they include:

- The Nigerian national response is still largely donor driven.
- Political commitment is not strong enough at the state and local government levels.
- There is still much stigmatization and discrimination against people living with HIV/AIDS.
- Inadequate community directed interventions.

Nigeria appreciates the efforts of the international organizations, development partners and NGOs at reducing the prevalence of HIV. However, more assistance is still needed in the areas of capacity building, program implementation and technical assistance.
The leadership of the National Agency for the Control of AIDS (NACA) is committed to innovations in prevention strategies, treatment, care and support with advocacy. Finally, NACA strives to sustain a robust collaboration with both local and international partners towards attaining its objective of bringing down the national HIV prevalence to the barest minimum as well as meeting and maintaining the Universal access targets by 2010.

12.1. Consultation/Preparation Process for the Country Progress Report

1) Which institutions/entities were responsible for filling out the indicator forms?

a) NAC or equivalent
   Yes
   No

b) NAP
   Yes
   No

c) Others
   Yes
   No
   (Please specify)

2) With inputs from Ministries:

   Education
   Yes
   No

   Health
   Yes
   No

   Labor
   Yes
   No

   Foreign Affairs
   Yes
   No

   Others
   Yes
   No
   (Please specify): Women Affairs

   Civil society organizations
   Yes
   No

   People living with HIV
   Yes
   No

   Private sector
   Yes
   No

   United Nations organizations
   Yes
   No

   Bilaterals
   Yes
   No
International NGOs
No Yes

Others
No Yes
(Please specify)

3) Was the report discussed in a large forum?
No Yes

4) Are the survey results stored centrally?
No Yes

5) Are data available for public consultation?
No Yes

6) Who is the person responsible for submission of the report and for follow-up if there are question on the Country Progress Report?

**Name/title:**
Dr. Micheal Kayode Ogungbemi, Director of Strategic Knowledge Management Department

**Date:** 31 March, 2010

**Signature:**

**Address:** National Agency for the Control of AIDS (NACA), Plot 823 Ralph Shodeinde Street, Central Area, Abuja Nigeria

**Email:** o_kayodem@yahoo.com

**Telephone:** +234-9-4613715
12.2. National Composite Policy Index (NCPI) 2010

COUNTRY: Nigeria

Name of the National AIDS Committee Officer in charge of NCPI submission and who can be contacted for questions:
