

II-2

Reduction in mother-to-child transmission

Data source: name

Ministry of Health

Data source: type

PROGRAMME MONITORING

Data collection period

1 1 2002 to 31 12 2002

PART I:

Data requirements % of total

1. Proportion of HIV+ pregnant women provided with ARV treatment*

T

###

2. MTCT rate in the absence of any treatment (%)

v

25.0

3. Efficacy of treatment provided (proportionate reduction in MTCT rate)

e

0.5

List below the 3 most common forms of treatment provided during the last 12 months and the %'s of all treatment that each represents.

Zidovudine from 36th week of pregnancy to delivery	100
Zidovudine to the new infant born X 6 weeks	100

PART II:

Indicator computation

INDICATOR SCORE

4. Calculate the indicator score using the formula:
 $\{ T*(1-e) + (1-T) \} * v$

###

* From national programme and behaviour indicator 4.
