

Progress towards Universal Access Kazakhstan

Universal access implies that all people should be able to have access to information and services that are:

Equitable – accessible – affordable – comprehensive – sustainable

In 2006, countries worldwide committed to setting ambitious national targets for scaling up towards Universal Access to HIV prevention, treatment, care and support by 2010. The targets focus on what could be achieved if the following obstacles can be addressed:

- **Predictable and sustainable financing**
- **Strengthening human resources and health systems**
- **Access to affordable commodities**
- **Stigma, discrimination, gender and human rights**

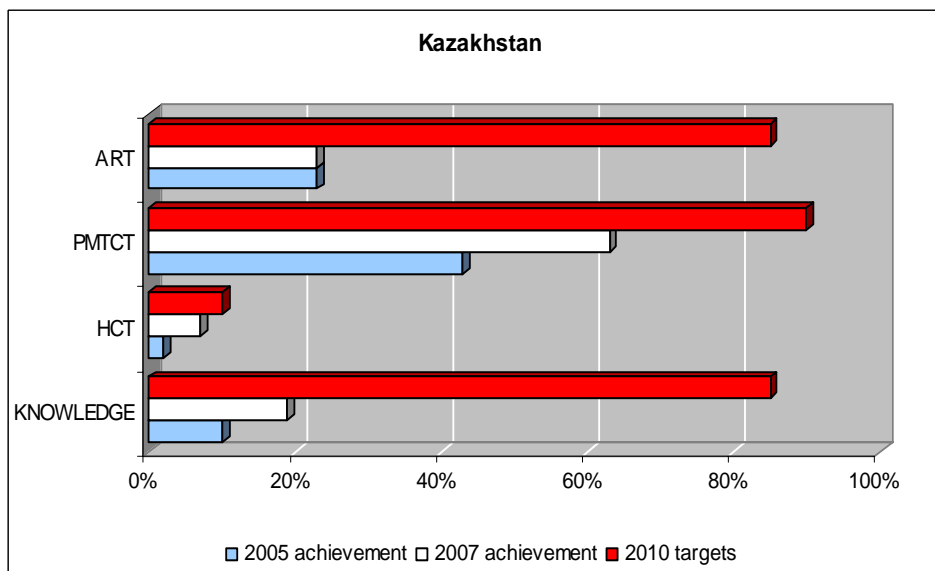

Review of National reports in 2008 demonstrated that Universal Access has catalyzed an accelerated and strengthened national HIV response with more results-based planning and a general overall increase in access to services. National political leadership and coordination were found to be critical to scale up. However more emphasis was needed on addressing the obstacles to scale up which would not support reaching universal access but also the achievement of the Millennium Development Goals. Specifically, there is a need to accelerate progress on HIV-prevention efforts, and to better utilise the resources available within civil society and people living with HIV.

Universal access has generated a continuing engagement with national partners to monitor and review progress towards universal access. This has resulted in a number of countries revising their national targets to ensure a sharper focus on areas in need of additional support.

Progress in Kazakhstan

Kazakhstan is highly committed to universal access as a means to keep its epidemic at concentrated level, using universal access targets as a guide for its National, regional (including South Kazakhstan oblast programme) and sectoral (Ministry of Justice) programmes. Care and support services are included in Round 7 of the Global Fund grant to allow scale up.

To achieve Universal Access targets, there is a specific need to concentrate on the quality of prevention, treatment, care and support services, while increasing coverage to ensure equal access to a wide spectrum of services.

There is also a need to further improve technical, institutional and managerial capacities of national counterparts, and to provide technical assistance to the government and civil society organizations in coordination and collaboration with different stakeholders.

Figure 1: The graph presents a snapshot of progress towards universal access based on 2005 and 2007 reported UNGASS achievements and 2010 reported targets, as per data available.

Please note that ARV and PMTCT targets may be subject to change based on revised numbers in need of ART.

"(We) commit ourselves to pursuing all necessary efforts to scale up nationally driven, sustainable and comprehensive responses... towards the goal of universal access to comprehensive prevention programmes, treatment, care and support by 2010."

2006 Political Declaration, (UN General Assembly, 15 June 2006)
